Berlin, 12 January 2019

## 2. Rostock LNG - HUB FOR MID - SCALE LNG

Central Eastern Europe + SW Baltics

# Rostock LNG - Key drivers for Mid Scale LNG development

- **Conventional use of LNG:** LNG is delivered on a large scale, stored and regasified for injection into the natural gas grid
- **Small-scale LNG applications cover the use of LNG**
  - as a sustainable alternative fuel for ships and long-haulage trucks
  - as an attractive energy source for industries in areas that are not connected to the natural gas grid
